COPYRIGHT 1999 DERWENT INFORMATION LTD

TITLE: Image display device for television,
has color filters
rotatably provided between light
source and image display
element, to sequentially convert
white light into various
colors to display full color image

INVENTOR: SHIGETA, K

PATENT-ASSIGNEE: CANON KK[CANO] , SHIGETA K[SHIGI]

PRIORITY-DATA: 2000JP-0191904 (June 26, 2000)

ABSTRACTED-PUB-NO: US20010055081A

BASIC-ABSTRACT:

NOVELTY - An illumination device has a number of color filters (31,32) rotatably arranged between a light source (30) and an image display element (2). The filter drivers (33,34) rotationally drives each of the filters individually, so that the white light emitted from the source is sequentially converted into each color of light, and the image quality of the full color image is switched.

USE - For displaying a field sequential format image for television, home video, personal computer, during conference.

ADVANTAGE - As filters are provided, the display characteristics can be changed without improving the large scale mechanical structure, focusing efficiency etc. A high performance display is flexibly optimized for diversified input images.

DESCRIPTION OF DRAWING(S) - The figure shows the image display device.

Image display element 2

Light source 30

Color filters 31,32

Filter drivers 33,34
